

## FDA Lab-3

KHAN MOHD OWAIS RAZA  
20BCD7138

**1] Create a numeric vector with elements 1, 3, 5, 7, 9 and assign it to a variable named "numbers".**

**Access the second element of the vector "numbers" created in the previous question.**

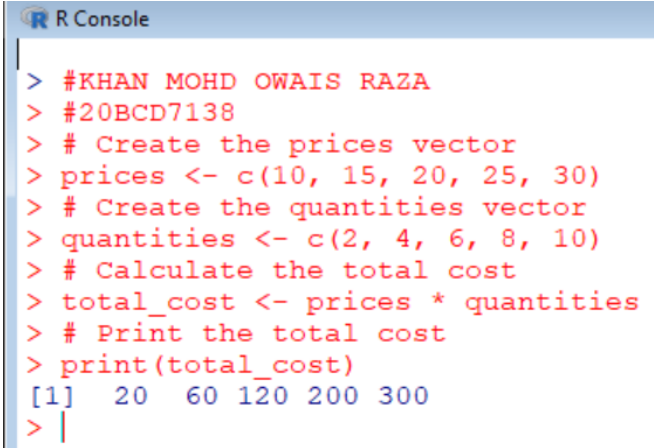

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create a numeric vector
numbers <- c(1, 3, 5, 7, 9)
# Access the second element
second_element <- numbers[2]
# Print the second element
print(second_element)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create a numeric vector
> numbers <- c(1, 3, 5, 7, 9)
> # Access the second element
> second_element <- numbers[2]
> # Print the second element
> print(second_element)
[1] 3
> |
```

**2] Create a vector "prices" with elements 10, 15, 20, 25, 30 and a vector "quantities" with elements 2, 4, 6, 8, 10. Calculate the total cost by multiplying the corresponding elements of both vectors.**

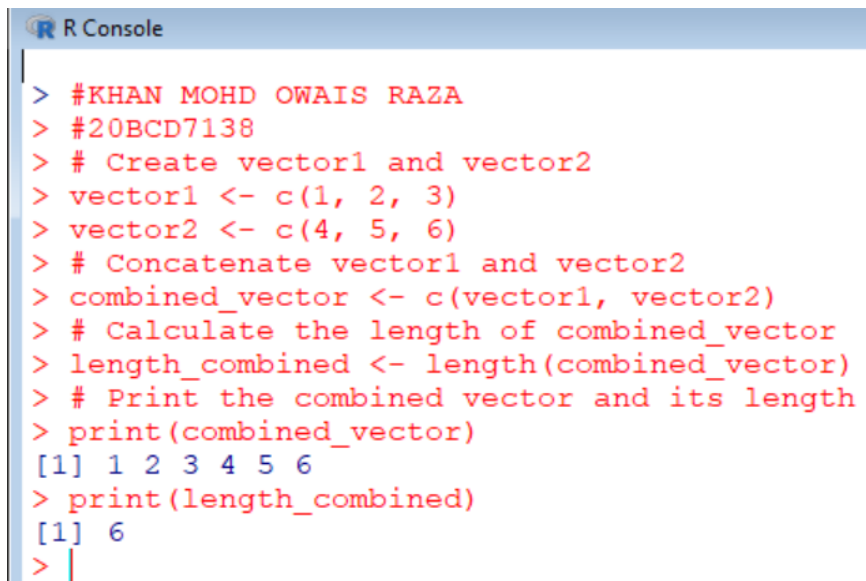

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create the prices vector
prices <- c(10, 15, 20, 25, 30)
# Create the quantities vector
quantities <- c(2, 4, 6, 8, 10)
# Calculate the total cost
total_cost <- prices * quantities
# Print the total cost
print(total_cost)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create the prices vector
> prices <- c(10, 15, 20, 25, 30)
> # Create the quantities vector
> quantities <- c(2, 4, 6, 8, 10)
> # Calculate the total cost
> total_cost <- prices * quantities
> # Print the total cost
> print(total_cost)
[1] 20 60 120 200 300
> |
```

**3] Concatenate the vectors "vector1" and "vector2" to create a new vector named "combined\_vector". Calculate the length of the vector "combined\_vector".**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector1 and vector2
vector1 <- c(1, 2, 3)
vector2 <- c(4, 5, 6)
# Concatenate vector1 and vector2
combined_vector <- c(vector1, vector2)
# Calculate the length of combined_vector
length_combined <- length(combined_vector)
# Print the combined vector and its length
print(combined_vector)
print(length_combined)
```

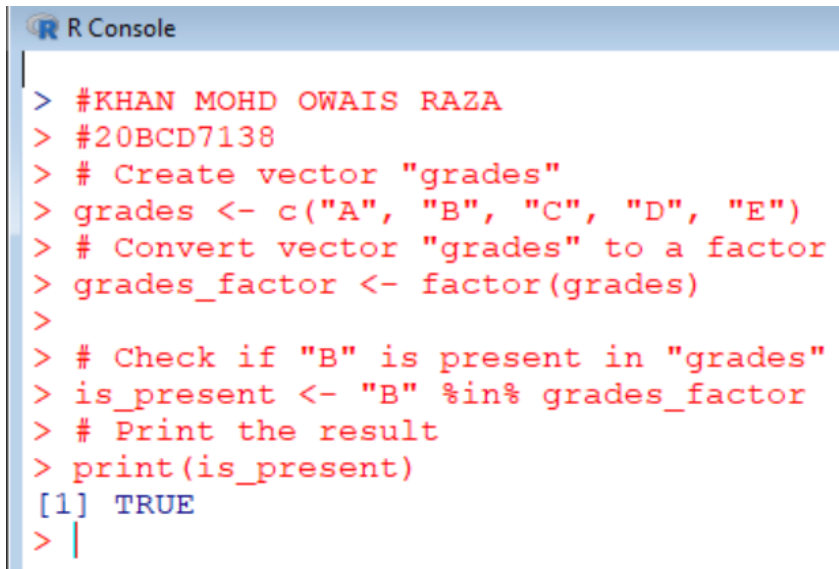

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector1 and vector2
> vector1 <- c(1, 2, 3)
> vector2 <- c(4, 5, 6)
> # Concatenate vector1 and vector2
> combined_vector <- c(vector1, vector2)
> # Calculate the length of combined_vector
> length_combined <- length(combined_vector)
> # Print the combined vector and its length
> print(combined_vector)
[1] 1 2 3 4 5 6
> print(length_combined)
[1] 6
> |
```

**4] Create a vector "grades" with elements "A", "B", "C", "D", "E" and convert it to a factor. Check if the value "B" is present in the vector "grades" created in the previous question.**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "grades"
grades <- c("A", "B", "C", "D", "E")
# Convert vector "grades" to a factor
grades_factor <- factor(grades)
# Check if "B" is present in "grades"
```

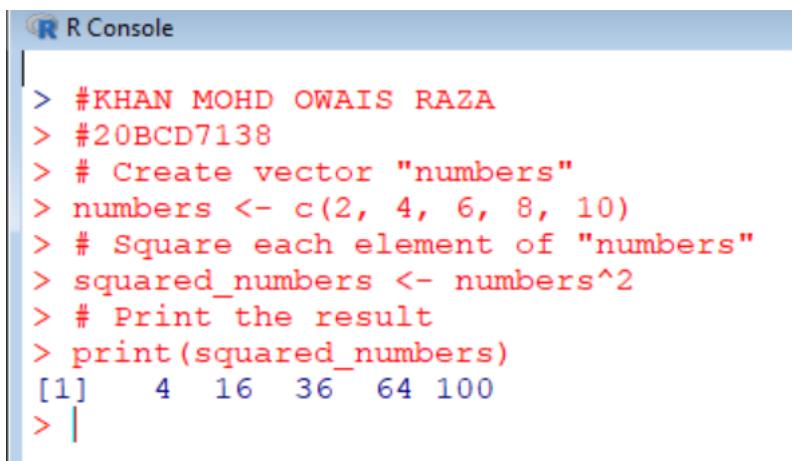

```
is_present <- "B" %in% grades_factor
# Print the result
print(is_present)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "grades"
> grades <- c("A", "B", "C", "D", "E")
> # Convert vector "grades" to a factor
> grades_factor <- factor(grades)
>
> # Check if "B" is present in "grades"
> is_present <- "B" %in% grades_factor
> # Print the result
> print(is_present)
[1] TRUE
> |
```

5] Create a vector "numbers" with elements 2, 4, 6, 8, 10. Square each element of the vector and store the result in a new vector named "squared\_numbers".

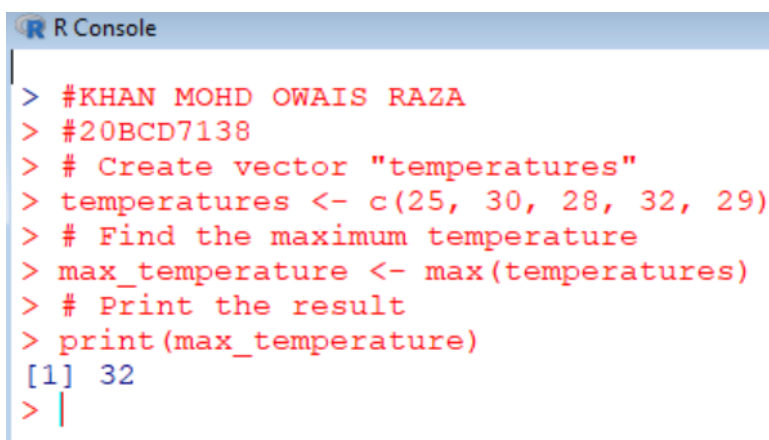

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "numbers"
numbers <- c(2, 4, 6, 8, 10)
# Square each element of "numbers"
squared_numbers <- numbers^2
# Print the result
print(squared_numbers)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "numbers"
> numbers <- c(2, 4, 6, 8, 10)
> # Square each element of "numbers"
> squared_numbers <- numbers^2
> # Print the result
> print(squared_numbers)
[1] 4 16 36 64 100
> |
```

**6] Create a vector "temperatures" with elements 25, 30, 28, 32, 29. Find the maximum temperature from the vector.**

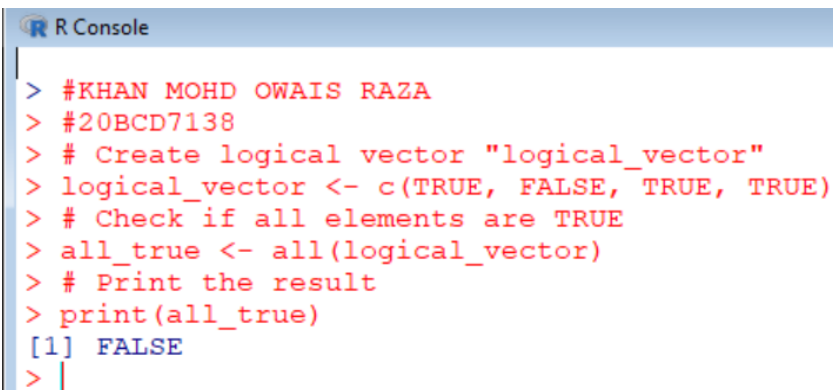

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "temperatures"
temperatures <- c(25, 30, 28, 32, 29)
# Find the maximum temperature
max_temperature <- max(temperatures)
# Print the result
print(max_temperature)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "temperatures"
> temperatures <- c(25, 30, 28, 32, 29)
> # Find the maximum temperature
> max_temperature <- max(temperatures)
> # Print the result
> print(max_temperature)
[1] 32
> |
```

**7] Create a logical vector "logical\_vector" with elements TRUE, FALSE, TRUE, TRUE. Check if all the elements in the vector are TRUE.**

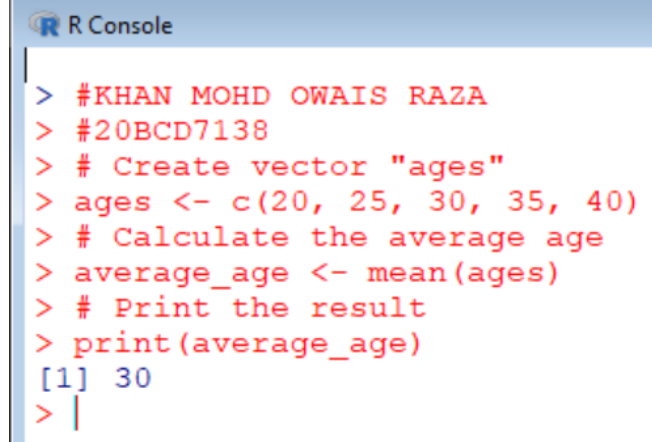

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create logical vector "logical_vector"
logical_vector <- c(TRUE, FALSE, TRUE, TRUE)
# Check if all elements are TRUE
all_true <- all(logical_vector)
# Print the result
print(all_true)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create logical vector "logical_vector"
> logical_vector <- c(TRUE, FALSE, TRUE, TRUE)
> # Check if all elements are TRUE
> all_true <- all(logical_vector)
> # Print the result
> print(all_true)
[1] FALSE
> |
```

8] Create a vector "ages" with elements 20, 25, 30, 35, 40. Find the average age from the vector.

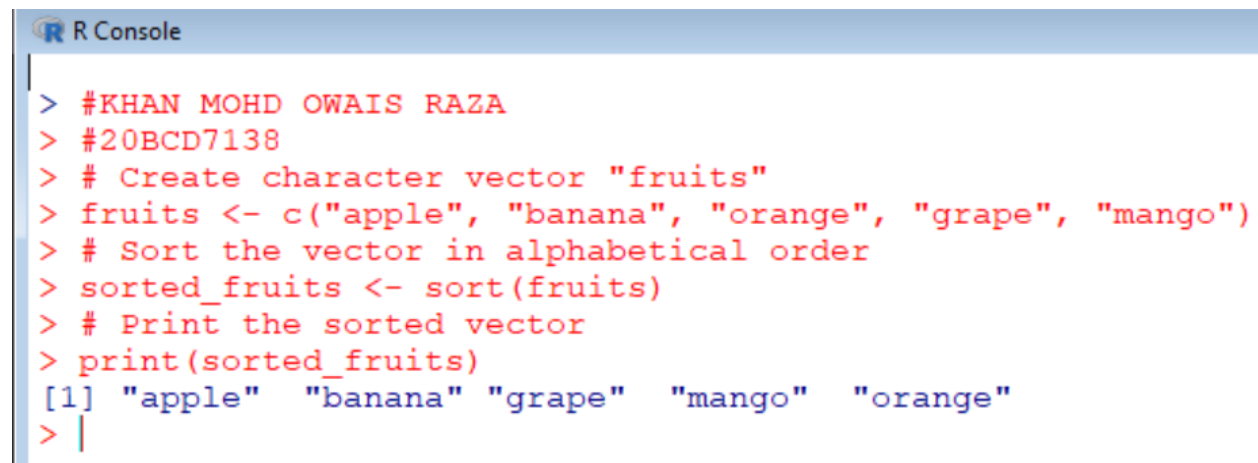

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "ages"
ages <- c(20, 25, 30, 35, 40)
# Calculate the average age
average_age <- mean(ages)
# Print the result
print(average_age)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "ages"
> ages <- c(20, 25, 30, 35, 40)
> # Calculate the average age
> average_age <- mean(ages)
> # Print the result
> print(average_age)
[1] 30
> |
```

9] Create a character vector "fruits" with elements "apple", "banana", "orange", "grape", "mango". Sort the vector in alphabetical order.

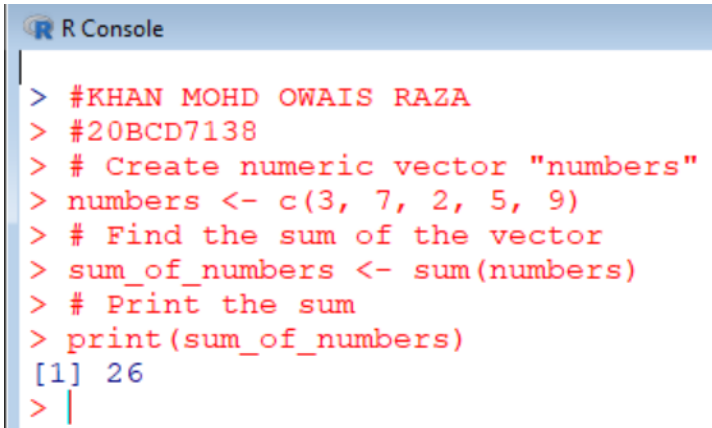

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create character vector "fruits"
fruits <- c("apple", "banana", "orange", "grape", "mango")
# Sort the vector in alphabetical order
sorted_fruits <- sort(fruits)
# Print the sorted vector
print(sorted_fruits)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create character vector "fruits"
> fruits <- c("apple", "banana", "orange", "grape", "mango")
> # Sort the vector in alphabetical order
> sorted_fruits <- sort(fruits)
> # Print the sorted vector
> print(sorted_fruits)
[1] "apple" "banana" "grape" "mango" "orange"
> |
```

**10] Create a numeric vector "numbers" with elements 3, 7, 2, 5, 9. Find the sum of the vector.**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create numeric vector "numbers"
numbers <- c(3, 7, 2, 5, 9)
# Find the sum of the vector
sum_of_numbers <- sum(numbers)
# Print the sum
print(sum_of_numbers)
```

A screenshot of an R console window with a blue header bar containing the R logo and the text "R Console". The console displays the following code in red text: 

```
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create numeric vector "numbers"
> numbers <- c(3, 7, 2, 5, 9)
> # Find the sum of the vector
> sum_of_numbers <- sum(numbers)
> # Print the sum
> print(sum_of_numbers)
```

 The output is shown in blue text: 

```
[1] 26
```

 The prompt character ">" is visible at the bottom.

**11] Create a vector "names" with elements "John", "Jane", "James", "Julia". Extract the first two elements of the vector.**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "names"
names <- c("John", "Jane", "James", "Julia")
# Extract the first two elements
first_two <- names[1:2]
# Print the extracted elements
print(first_two)
```

A screenshot of an R console window with a blue header bar containing the R logo and the text "R Console". The console displays the following code in red text: 

```
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "names"
> names <- c("John", "Jane", "James", "Julia")
> # Extract the first two elements
> first_two <- names[1:2]
> # Print the extracted elements
> print(first_two)
```

 The output is shown in blue text: 

```
[1] "John" "Jane"
```

 The prompt character ">" is visible at the bottom.

**12] Create a numeric vector "numbers" with elements 1, 2, 3, 4, 5. Add 1 to each element of the vector.**

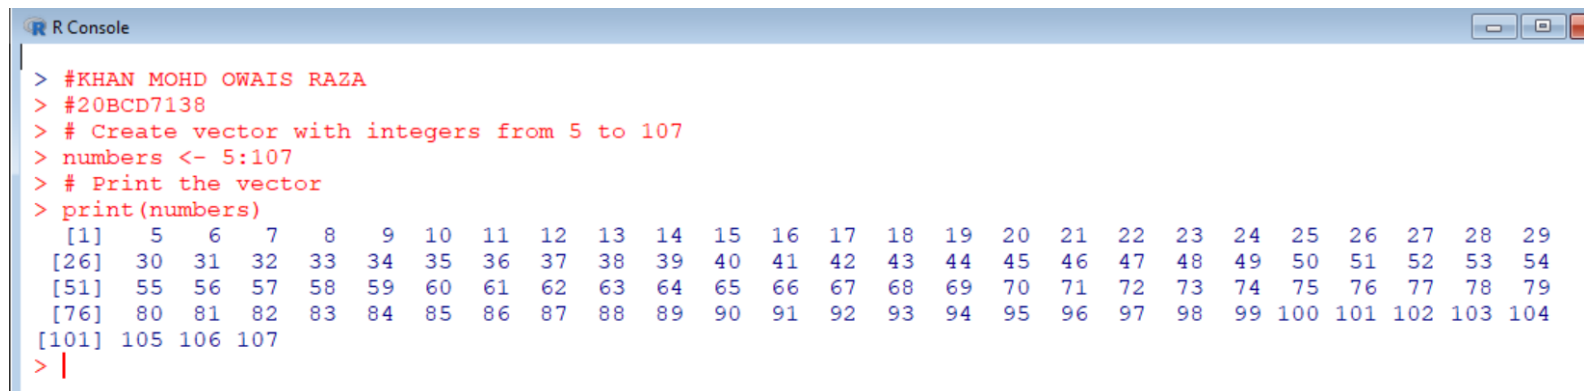

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector "numbers"
numbers <- c(1, 2, 3, 4, 5)
# Add 1 to each element
numbers_plus_one <- numbers + 1
# Print the updated vector
print(numbers_plus_one)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector "numbers"
> numbers <- c(1, 2, 3, 4, 5)
> # Add 1 to each element
> numbers_plus_one <- numbers + 1
> # Print the updated vector
> print(numbers_plus_one)
[1] 2 3 4 5 6
> |
```

**13] Create a numeric vector with all integers from 5 to 107.**

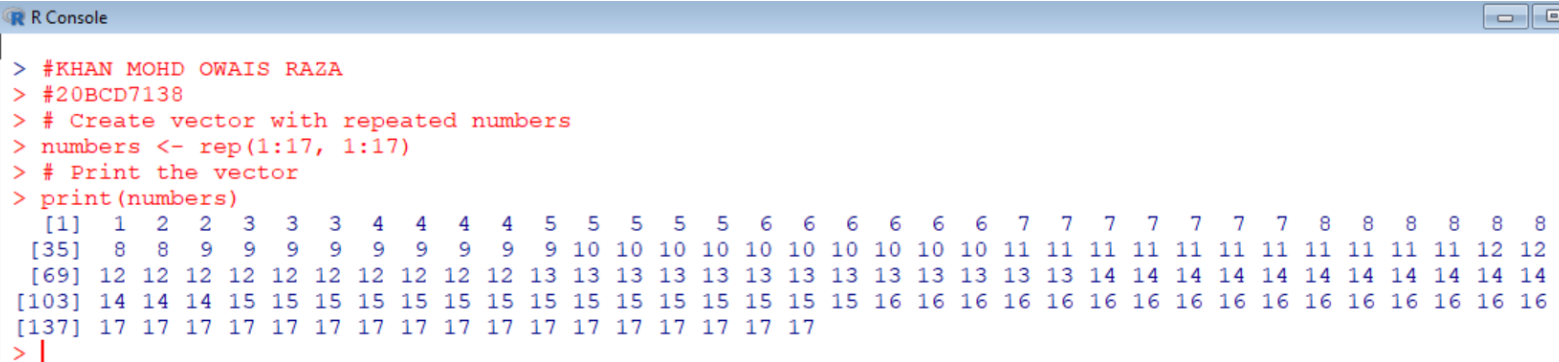

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector with integers from 5 to 107
numbers <- 5:107
# Print the vector
print(numbers)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector with integers from 5 to 107
> numbers <- 5:107
> # Print the vector
> print(numbers)
[1] 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29
[26] 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54
[51] 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79
[76] 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104
[101] 105 106 107
> |
```

**14] Create a vector that contain all numbers from 1 to 17, where each number occurs the the same number of times as the number itself eg. 1, 2, 2, 3, 3, 3...**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create vector with repeated numbers
numbers <- rep(1:17, 1:17)
# Print the vector
print(numbers)
```

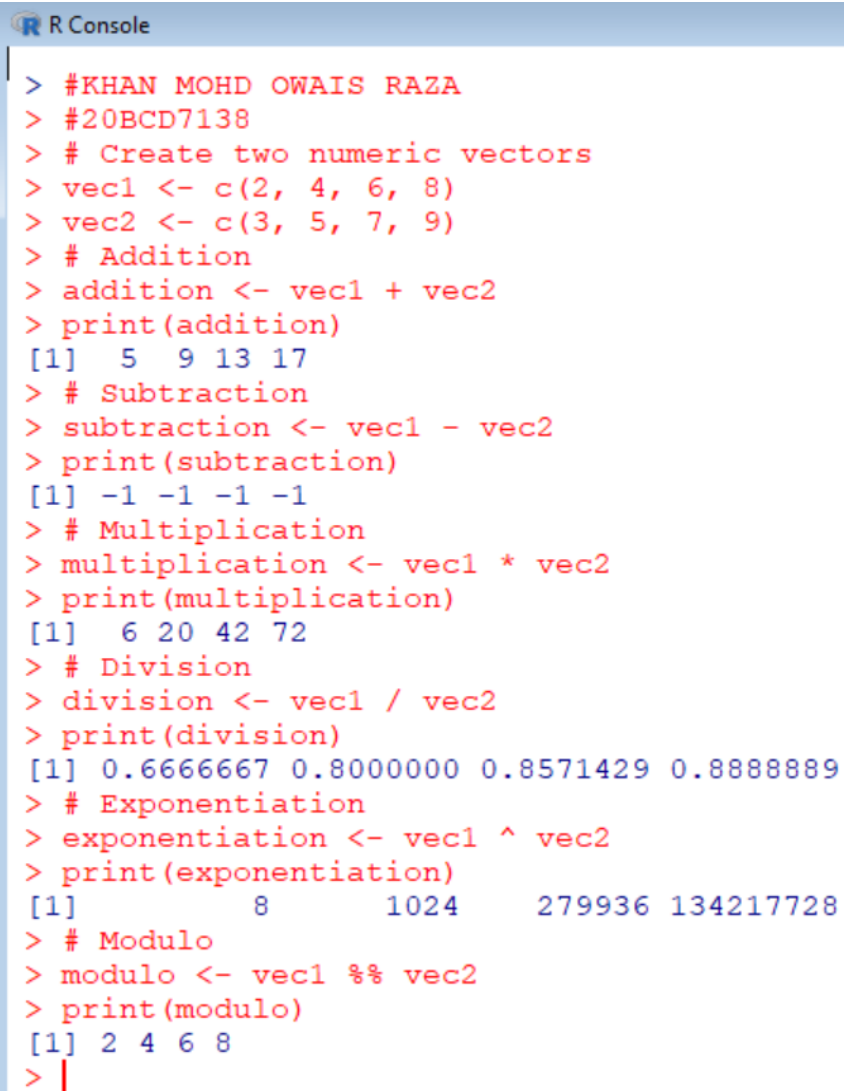

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create vector with repeated numbers
> numbers <- rep(1:17, 1:17)
> # Print the vector
> print(numbers)
 [1] 1 2 2 3 3 3 4 4 4 4 5 5 5 5 5 6 6 6 6 6 6 7 7 7 7 7 7 7 8 8 8 8 8 8
[35] 8 8 9 9 9 9 9 9 9 9 9 10 10 10 10 10 10 10 10 10 10 11 11 11 11 11 11 11 11 11 11 11 12 12
[69] 12 12 12 12 12 12 12 12 12 12 13 13 13 13 13 13 13 13 13 13 14 14 14 14 14 14 14 14 14 14 14 14
[103] 14 14 14 15 15 15 15 15 15 15 15 15 15 15 15 15 15 15 15 15 16 16 16 16 16 16 16 16 16 16 16 16
[137] 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17 17
> |
```

**15] Create two numeric vectors of length 4 and test run all the basic operators (as seen in the table earlier) with these two as arguments.**

```
#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create two numeric vectors
vec1 <- c(2, 4, 6, 8)
vec2 <- c(3, 5, 7, 9)
# Addition
addition <- vec1 + vec2
print(addition)
# Subtraction
subtraction <- vec1 - vec2
print(subtraction)
# Multiplication
multiplication <- vec1 * vec2
print(multiplication)
# Division
division <- vec1 / vec2
print(division)
# Exponentiation
exponentiation <- vec1 ^ vec2
```

```
print(exponentiation)
# Modulo
modulo <- vec1 %% vec2
print(modulo)
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create two numeric vectors
> vec1 <- c(2, 4, 6, 8)
> vec2 <- c(3, 5, 7, 9)
> # Addition
> addition <- vec1 + vec2
> print(addition)
[1] 5 9 13 17
> # Subtraction
> subtraction <- vec1 - vec2
> print(subtraction)
[1] -1 -1 -1 -1
> # Multiplication
> multiplication <- vec1 * vec2
> print(multiplication)
[1] 6 20 42 72
> # Division
> division <- vec1 / vec2
> print(division)
[1] 0.6666667 0.8000000 0.8571429 0.8888889
> # Exponentiation
> exponentiation <- vec1 ^ vec2
> print(exponentiation)

> # Modulo
> modulo <- vec1 %% vec2
> print(modulo)
[1] 2 4 6 8
> |
```

## MATRICES

1] If  $M = \text{matrix}(c(1:10), \text{nrow}=5, \text{ncol}=2, \text{dimnames}=\text{list}(c('a','b','c','d','e'), c('A','B')))$

What is the value of:  $M$  ?

Consider the matrix  $M$ , What is the value of:  $M[1,]$ ,  $M[,1]$ ,  $M[3,2]$ ,  $M['e','A']$  ?

#KHAN MOHD OWAIS RAZA

#20BCD7138

```
M <- matrix(c(1:10), nrow = 5, ncol = 2, dimnames = list(c('a',  
'b', 'c', 'd', 'e'), c('A', 'B')))
```

R Console

```
> #KHAN MOHD OWAIS RAZA  
> #20BCD7138  
> M <- matrix(c(1:10), nrow = 5, ncol = 2, dimnames = list(c('a', 'b', 'c', 'd', 'e'), c('A', 'B')))  
> M  
  A B  
a 1 6  
b 2 7  
c 3 8  
d 4 9  
e 5 10  
> M[,1]  
a b c d e  
1 2 3 4 5  
> M[3,2] M['e','A']  
Error: unexpected symbol in "M[3,2] M"  
>  
> M[3,2]  
[1] 8  
> M['e','A']  
[1] 5  
> |
```

2] Consider the matrix  $N$

$N = \text{matrix}(c(1:9), \text{nrow}=3, \text{ncol}=3, \text{dimnames}=\text{list}(c('a','b','c'), c('A','B','C')))$

What is the value of:  $\text{diag}(N)$  ?

What is the value of:  $\text{diag}(4,3,3)$  ?

#KHAN MOHD OWAIS RAZA

#20BCD7138

```
N <- matrix(c(1:9), nrow = 3, ncol = 3, dimnames = list(c('a',  
'b', 'c'), c('A', 'B', 'C')))
```

```
diag(N)
```

```
diag(4, 3, 3)
```

```

> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> N <- matrix(c(1:9), nrow = 3, ncol = 3, dimnames = list(c('a', 'b', 'c'), c('A', 'B', 'C')))
> diag(N)
[1] 1 5 9
> diag(4, 3, 3)
      [,1] [,2] [,3]
[1,]    4    0    0
[2,]    0    4    0
[3,]    0    0    4
> |

```

3) If  $M = \text{matrix}(c(1:9), 3, 3, \text{byrow} = T, \text{dimnames} = \text{list}(c('a', 'b', 'c'), c('d', 'e', 'f')))$  What is the value of:

**rownames(M)**

**colnames(M)**

```
#KHAN MOHD OWAIS RAZA
```

```
#20BCD7138
```

```
M <- matrix(c(1:9), 3, 3, byrow = TRUE, dimnames = list(c('a', 'b', 'c'), c('d', 'e', 'f')))
```

```
rowcol_names <- list(rownames(M), colnames(M))
```

```

> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> M <- matrix(c(1:9), 3, 3, byrow = TRUE, dimnames = list(c('a', 'b', 'c'), c('d', 'e', 'f')))
> rowcol_names <- list(rownames(M), colnames(M))
>
> rownames(M)
[1] "a" "b" "c"
> colnames(M)
[1] "d" "e" "f"
> |

```

4) What is the value of: **upper.tri(M)**, **lower.tri(M)**, **lower.tri(M, diag=T)** ?

```

> upper.tri(M)
      [,1] [,2] [,3]
[1,] FALSE TRUE  TRUE
[2,] FALSE FALSE TRUE
[3,] FALSE FALSE FALSE
> lower.tri(M)
      [,1] [,2] [,3]
[1,] FALSE FALSE FALSE
[2,] TRUE  FALSE FALSE
[3,] TRUE  TRUE  FALSE
> lower.tri(M, diag = T)
      [,1] [,2] [,3]
[1,] TRUE FALSE FALSE
[2,] TRUE  TRUE FALSE
[3,] TRUE  TRUE  TRUE
> |

```

5] Consider two matrix, M,N  $M = \text{matrix}(c(1:9), 3, 3, \text{byrow} = \text{TRUE})$   $N = \text{matrix}(c(1:9), 3, 3)$   
What is the value of:  $M * N$ ?

#KHAN MOHD OWAIS RAZA

#20BCD7138

```
M <- matrix(c(1:9), 3, 3, byrow = TRUE)
```

```

## DATAFRAMES

Create a data frame "df" with the following data:

Name	Age	City
John	25	London
Emma	30	New York
Mike	35	Paris

```

#KHAN MOHD OWAIS RAZA
#20BCD7138
# Create the data frame
df <- data.frame(
  Name = c("John", "Emma", "Mike"),
  Age = c(25, 30, 35),
  City = c("London", "New York", "Paris"))

```

```
# Print the data frame
df
```

```
R Console
> #KHAN MOHD OWAIS RAZA
> #20BCD7138
> # Create the data frame
> df <- data.frame(
+   Name = c("John", "Emma", "Mike"),
+   Age = c(25, 30, 35),
+   City = c("London", "New York", "Paris"))
> # Print the data frame
> df
  Name Age   City
1 John  25 London
2 Emma  30 New York
3 Mike  35   Paris
> |
> # A. Print the dataframe
> # Print the data frame
> df
  Name Age   City
1 John  25 London
2 Emma  30 New York
3 Mike  35   Paris
> # B. Find the number of rows and columns in the data frame "df"
> num_rows <- nrow(df)
> cat("Number of rows:", num_rows, "\n")
Number of rows: 3
> num_cols <- ncol(df)
> cat("Number of columns:", num_cols, "\n")
Number of columns: 3
> # C. Extract the "Age" column from the data frame "df"
> age_column <- df$Age
> age_column <- df["Age"]
> # D. Extract the second row of the data frame "df"
> second_row <- df[2, ]
> print(second_row)
  Name Age   City
2 Emma  30 New York
> # E. Add a new column "Country" to the data frame "df" with values "UK", "USA", "France"
> df$Country <- c("UK", "USA", "France")
> print(df)
  Name Age   City Country
1 John  25 London     UK
2 Emma  30 New York   USA
3 Mike  35   Paris  France
```

```
> # F. Calculate the summary statistics (mean, median, min, max) for the
